

## Cinetal & Sony Monitor Yoke Mount Systems

Cinetal Yoke Mount System

Sony Yoke Mount System

**Over the past several years, Oppenheimer Camera Products** has developed a series of Monitor Yoke Mounts for the new generation of production LCD monitors on the market today. Our first system was designed for the Panasonic BT-LH1700 in late 2005. We are now introducing systems for the Cinetal Cinemage and the Sony BVM-L231 monitors.

As with all of our Yoke Mount systems, the Cinetal and Sony Yoke Mounts easily attach to existing mounting holes on each monitor. There are no modifications required to your factory original monitor.

The Cinetal and Sony Yoke Mount Systems will only mount onto junior lighting stands or to our heavy duty table bases. For the protection of your monitor, we have determined that a baby stand is just too light weight to support a 40-60 pound monitor!

Our Yoke Mounts are constructed of aircraft grade aluminum, with bronze

bushings and a high grade anodized or powder coated surface. The lock knob is generously large for easy locking, even with gloved hands. Because the system is balanced, even if you do not lock the lock knob, monitor movement won't cause the stand to topple. The systems are sturdy, yet reasonably lightweight.

The Sony BVM-L231 uses a separate control panel. We have provided a platform for that control panel just below the monitor. It sits on its own platform securely and within easy reach to adjust all monitor functions.

We have worked with Innerspace Cases in North Hollywood to design a well protected case for each of these monitors.

Oppenheimer Camera Products will continue to expand the line of Monitor Yoke Mounts as new production LCD systems come to market. We now have systems for the Cinetal Cinemage, Sony BVM-L231 and a variety of other monitors.
