Optimo 12x Zoom Motor Bracket

Oppenheimer Camera Products developed our Angenieux Optimo Accessory System shortly after the release of the Angenieux Optimo 24-290mm 12x lens. The Optimo Carry Handle installs simply and easily onto any 12x Optimo lens without requiring any modification to the lens.

The 12x Optimo Carry Handle is available as a standard unit or engraved "HD" for the HD version of the lens. We designed the 12x Optimo Carry Handle to visually blend into the design of the original lens.

With the introduction of the Angenieux Optimo 17-80mm 4.7x lens, we designed our smaller carry handle for that lens.

Both carry handles can stand on their own, or fold down as needed. There is a 3/8x16 threaded boss on each carry handle for mounting accessories like an on-board monitor or a cine tape.

For the 12x Optimo, we also have a series of Zoom Motor Support Brackets, one for the classic Heden M26 motor, one for the Preston or Arri digital motors, and a third for the Heden or M One vertical motors. These Zoom Motor Brackets mount to existing mount points

on the Angenieux lens, again without any modification, and allow the motors to engage the zoom gear built into the lens.

The Heden M26 bracket is notable. We use an idler gear assembly which accomplishes two goals. First it allows the use of the built-in zoom gear, and second it keeps the available torque at it's optimum so even this simple motor can drive the zoom under almost any conditions.

For the 4.7x Optimo we have a simple motor bracket and gear for the Heden M26 motor. Again, no modification is required to the original lens.

Oppenheimer Camera Products will be expanding this line of products as new lenses are introduced.
